NORTHSIDE NEUROLOGY ASSOCIATES

Clinical Progress Note & Prior Authorization Request

Date of Visit: May 28, 2026

Patient: Jane Doe is a 34-year-old female who presents today for follow-up of her chronic headache disorder. She is insured through BlueCross under member identification number 12345.

History of Present Illness: The patient reports a longstanding history of recurrent, throbbing, unilateral headaches accompanied by photophobia and nausea, consistent with migraine without aura. Episodes now occur up to twelve days per month. She has trialed and failed adequate courses of both NSAIDs and two separate triptan agents, and more recently a course of topiramate, without meaningful improvement.

Assessment: Chronic migraine, intractable, without status migrainosus (ICD-10 G43.909). Given the increasing frequency, the refractory nature of her symptoms, and new-onset positional features, intracranial pathology must be excluded prior to escalating therapy.

Plan: I am requesting prior authorization for magnetic resonance imaging of the brain without contrast (CPT 70551) to rule out a structural or secondary cause of her headaches. The study is medically necessary before initiating CGRP monoclonal antibody therapy. The request is submitted to BlueCross for member 12345.
